Assignment 1127 Feedback

Due to time constraints, feedback has been limited to an overall assessment here with accompanying proficiencies. If you have questions on what you see here, please let me know.

Yes, tactile/haptic feedback for touch interfaces is very much a dream that we are still chasing. Your paper not only provides some good ideas for design but also provides a thorough literature survey on the current work in this area. Illustrations are well-chosen and carry the point across very effectively; plus your rationale and metrics forecast is well-grounded in course concepts, with clear and sensible reasoning.

The one thing that isn't totally clear is whether Tactus themselves have proposed some kind of design based on their technology. Your three ideas (well, the first two) are such natural applications of their technology that I would be surprised if Tactus had not already explored it. Thus, some comparative statement of what ideas have been proposed for this technology vs. what you have would help contextualize things better.

Ultimately though that is a small knock in what is otherwise a well-executed design document. I'd suggest that you submit this to ULRA but I think I've suggested that you submit everything you've done to ULRA so far :-P So at the very least I guess you can pick and choose :)
